

Dissemination of DUT1 through the use of Virtual Observatory

Florent Deleflie, J. Berthier, Observatoire de Paris -IMCCE,
C. Barache, Observatoire de Paris; D. Gambis, Observatoire de Paris.

What is a Virtual Observatory VO project?

- **Virtual observatory (VO)** is a collection of interoperating data archives and software tools which utilize the internet to form a scientific research environment in which astronomical research programs can be conducted.
- Same way as a real observatory consists of telescopes, each with a collection of unique astronomical instruments, the VO consists of a collection of data centres, each with unique collections of astronomical data, software systems and processing capabilities.
- The main goal is to allow transparent and distributed access to scientific data available worldwide (Votable standard file, XML format)
- Define services to access the data via Internet (ex Web service en soap, registry, Astrogrid for computation)
- Inter-operability of tools able to process these data (ex Topcat et Voplot for plots, Aladin celestial catalogs)
- This allows scientists to discover, access, analyze, and combine nature and lab data from heterogeneous data collections in a user-friendly manner.

Objectives

- To make solutions of geodetic products be comparable in an homogeneous way
- Develop webservice to directly interact within scientific analysis softwares
- Develop an efficient interface between different scientific communities linked to geodesy
 - Between geophysics and astronomy
 - ...

Specific VO Projects for IERS

Two approaches

- 1 – Execute program
- Make available EOP and in particular DUT1 using web service (.exe in a different language launched from outside)
- Operational, however results not in XML format and the results only contains a single data line

LINKS

WEB SERVICE

By executing the following programmes on your computer, obtain data from hpiers server.

The Windows programmes only work in the command line mode (with the msdos windows).

1- Earth orientation parameters from civil date (combined series C04 - [click here for description](#))

Address of the webservice server : http://hpiers.obspm.fr/eop-pc/webservice/server_EOP2.php

Example of a php client calling this webservice : http://hpiers.obspm.fr/eop-pc/webservice/files/client_EOP2.php

Getting the php client source : http://hpiers.obspm.fr/eop-pc/webservice/files/client_EOP2_php.txt

Inputs : date (YYYY MM DD)

Outputs : MJD x y UT1-UTC LOD dX dY x Err y Err UT1-UTC Err Lod Err dY Err dY Err

" " s s " " " " s s " "

Executable for Windows : [DOWNLOAD](#)

Executable for Linux : [DOWNLOAD](#)

2- Earth Orientation Matrix at a given instant - [see also](#)

Address of the webservice server : http://hpiers.obspm.fr/eop-pc/webservice/server_MATRICE_EOP.php

Example of a php client calling this webservice : http://hpiers.obspm.fr/eop-pc/webservice/files/client_MATRICE_EOP.php

Getting the php client source: http://hpiers.obspm.fr/eop-pc/webservice/files/client_MATRICE_EOP_php.txt

Inputs: year month day hour minute seconde polar motion nutation diurnal/semi-diurnal tides.

C04.exe 2006 08 12

C04 parameters - 2006, August 12
MJD (Modified Julian Date) : 53959
x (arcsecond) : 0.106045
y (arcsecond) : 0.260583
UT1-UTC (second) : 0.1784529
UTC-TAI (second) : -33
LOD (second) : 0.0011146
dPsi (arcsecond) : 0.000000
dEpsilon (arcsecond) : 0.000000
```

2 - Principles of the OV tool

- Requirements:
- The tool extracts and shows:
 - Times series of geodetic products:
 - EOP
 - Stations positions
 - Transformation parameters
 - Over a period chosen by the user
 - Output: ASCII or VO-Table
- The tool has to:
 - Be easy to use
 - Be compatible with: Internet Explorer, Firefox...
 - Be made up of independant sub-programs,
 - Be securised
 - Give results quickly

The VO-concept

- Use of data where they are stocked : VO-Table format (XML)
 - To facilitate links between communities
 - Data need not to be duplicated
- Web services
 - Compatibility between external softwares ensured by VO-Table format
 - Existing tools: top cat, VO-Plot

Format VO-Table

- Format VOTable is structured
- It uses standard XML and is independent from the computer system
- The analyses are made easier

VO approach

- automatic retrieval of the EOP C04 file “c04.62-now” and conversion into VO(XML) format
- accessible via FTP
- The file contain the full data set
- Compatible with VO software packages

Répertoire FTP /eop-pc/eop/eopc04 à hpiers.obspm.fr - Windows Internet Explorer
